

CHOLINE CHLORIDE 60 % GRANULE PURE FOR SURE

Choline chloride 60% is dry granule on cereal carrier. It is a source of choline supplementation in animals and poultry. It is obtained by spraying it thoroughly with aqueous choline chloride on cereal carrier-corn cob and drying it to low moisture content.

Role of Choline :

Choline is referred as vitamin B4. It has been claimed as a performance promoter in animals. Choline is essential substance for growth of animals. It is basic component of cell membrane, and important component for the transmission of impulses. Choline is important nutrients for health of animals, it can promote the fat metabolism in the liver (so-called lipotropic action); can promote the bio-synthesis of phosphatidylcholine which can speed up the growth and improve breeding & hatchability of animals. Choline can enhance the utilization efficiency of feed additives. As a methyl group source, it can promote the reformulation of amino acid, and sometimes even can replace some of the methionine.

Since there is no consistency in the choline content in the natural feedstuffs and also their bioavailability is not predictable, Choline chloride are widely used as choline supplements.

Description

Product	Assay% w/w	Choline%	Moisture (w/w)
Choline Chloride	Min 60	Min 44.7	Max 2%

Dosage :

Layer : 500gm/ton of feed,

Broiler : 1kg / ton of feed &

Breeder : 1.2 kg/ton of feed

or as suggested by nutritionist
